Efectis Nederland report

2009-Efectis-R1101

**Reaction to fire testing of Fiberplast flooring
panels; Series Classic: Types; Coffee Brown and
Natural Brown
Ignitability test according to EN-ISO 11925-2:2002**

© 2009 Efectis Nederland BV: a TNO company

This report is issued by Efectis Nederland BV (previously TNO Centre for Fire Research). Efectis Nederland BV and her sister company Efectis France are full subsidiaries of Efectis Holding SAS since 1st January 2008, in which the Dutch TNO and the French CTICM participate. The activities of the TNO Centre for Fire Research were privatised in Efectis Nederland BV since 1st July 2006. This is in response to international developments and requests by customers. In order to be able to give a better answer to the customer's request and offer a more comprehensive service of high quality and a wider range of facilities, the international collaboration has been further expanded. This is done with highly experienced partners in fire safety in Norway (Sintef-NBL), Spain (Afiti-Licof), Germany (IFT), USA (South West Research Institute) and China (TFRI). Further information can be found at our website.

Product identification:

Fiberplast flooring panels; Series Classic: Types; Coffee Brown and Natural Brown

Abstract:

Determination of the ignitability properties of the product by direct small flame impingement according to EN-ISO 11925-2: 2002 with the objective the reaction to fire classification according to EN 13501-1.

Intended application:

The product will be used as floor covering.

Manufacturer/importer:

Fiberplast BV
De Roef 7a
NL - 9206 AK DRACHTEN
The Netherlands

Product description:

According to the sponsor the product is Series Classic: Types; Coffee Brown and Natural Brown

Structural extruded profile made from a mixture of recycled wood and plastics, composed of:

- 50-53 % recycled wood dust
- 42-45 % recycled HDPE (high density polyurethane)
- 2.5-4% additives: UV stabilizer, AO stabilizer, colour pigments
- Lamella thickness 5 mm. Open void in middle of profile
- Colours: Coffee Brown and Natural Brown

The total product has a thickness of approx. 25 mm
Mass per unit area approx. 16.9 kg/m²

Samples:

Sampling procedure: The samples were submitted by the sponsor.
Age: According sponsor produced 26th May 2009.
Date of receipt: 22nd September 2009

Specimen preparation:

Substrate used: 6 mm fibre cement board non-combustible (ISO 390 and class A1/A2 according to EN 13238).
Conditioning: Prior to the examinations, the specimens were conditioned over a period of at least 1 week at a temperature of (23 ± 2) °C and a relative humidity of (50 ± 5) % according to § 4.1 of EN 13238:2001.

Examination:

Number of tests: A total of 9 single ignitability tests were carried out according to EN-ISO 11925-2:2002.

Deviations from the test method: None

Harmonised Product Standard: At the time of examination of the product, the sponsor was not aware of a related existing Harmonised Product Standard.

Date of examination: 20th October and 3rd November 2009

The results are given in Table 1.

Table 1: Ignitability classification parameter results

Flame application time: 15 s					
Sample	Ignition of sample {Y=Yes/N=No}	Maximum flame height [mm]	t ₁₅₀ [s]	Afterburning time [s]	Ignition of filter paper {Y=Yes/N=No}
Surface ignition					
1LCB	Y	25	∞ not reached	0	N
2LCB	Y	25		0	N
3LCB	Y	25		0	N
4LCB	Y	25		0	N
5LCB	Y	25		0	N
6LCB	Y	25		0	N
1LNB	Y	25		0	N
2LNB	Y	25		0	N
3LNB	Y	25		0	N
Average		25			
Classification parameters		150 mm not reached within 20 s			N

LCB = Longitudinal direction, Coffee Brown - LNB = Longitudinal direction, Natural Brown (Longitudinal direction is worst case)

Observations of physical behaviour of the test specimen: None

Conclusions:

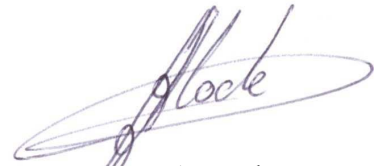

A formal classification is to be assessed in accordance with EN 13501-1, "Fire classification of construction products and building elements – Part 1: Classification using data from reaction to fire tests".

Remarks:

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

Regarding the precision of the test method, following Annex B of EN-ISO 11925-2 the absolute repeatability/reproducibility for this test method is estimated to lie within 3 s to 5 s for all times measured.
